

Do you think CMP is acting in the best interests of Mainers?

Did you know that CMP will raise all its customers' electricity bills to cover repair costs from the storm that left many Mainers without...

Were you aware that the more of its customers' money CMP spends on equipment, the more CMP earns in guaranteed profits?

Did you know that for years CMP has fought to stop solar policies that would benefit Maine energy consumers?

Some of the many personal anecdotes submitted by Mainers:

“The behavior of this "public" utility is appalling. All of the above clearly details their activities to benefit shareholders at the expense of customers. The real question here is what is going to be done about it by our so-called representatives in the Legislature and by the non-regulators in the administration.”

“I am disgusted that CMP continues to lobby against solar power and try to block its customers from producing their own power period. As a regulated monopoly utility they should be required to serve Maine people, not their foreign parent company and shareholders. We cannot continue to let CMP keep Maine in the dark ages.”

“This is what happens when a company has a monopoly on the market. They need some American-based competition that gives us choice, because we don't like CMP but if you want to have electricity, there isn't another option right now. We're stuck. And the idea that they lobby against solar power and strike deals to force us to pay for power we generate is ridiculous.”

“I am a solar owner and am tired of CMP and LePage’s PUC trying to take away all the benefits that I receive from solar but also the benefits that CMP and the State of Maine receive from my having solar on my roof.”

“Bills are almost double from this time last year and they continue to escalate. Talk to them on the phone and they just dance around your questions and you hang up with no more knowledge then you had before you called!”

“Have 2 bills - both doubled in one month - almost to the penny - interesting the one for our camp - which we had not visited for a month - doubled. When I called to ask why I was treated horribly - it was my fault, their meters are 99% accurate and it was my problem, just pay it. My "delivery" charges were more than my electric usage! Don't tell me I'm not paying for the October outage. It is extortion. Can't wait till I have enough saved for solar!”
